

Can I still get pregnant after the COVID-19 vaccine?

At this time, there is no proof that the COVID-19 vaccine keeps men and women from having kids.

Did you know?

- Thousands of women have received the COVID-19 vaccine and later become pregnant.
- The COVID-19 vaccine does not change your DNA.
- The COVID-19 vaccines and the COVID-19 virus do not change a woman's body or block the baby's growth.
- The COVID-19 vaccines are "new," but first, the technology used for the vaccine was studied for over ten years.

- Doctors say people who are pregnant or breastfeeding should get the COVID-19 shots.

- FDA-approved and authorized Covid-19 vaccines can help you stay healthy for pregnancy now and in the future!
